- Kenwood TK-10 Series
- Kenwood TK-90 Series
- David Clark Wired/Wireless
- Sigtronics EIA
- Sigtronics US Series

Sealed, Die-cast Aluminum,
Powder Coated Casing.

The Simple Solution.

The BKRA-1CF was originally developed for use by the State of California's Division of Forestry, CalFire, and to take the 'complicated' out of the installation of an Intercom and Radio system into an apparatus. Each device interfaced has only ONE place it can be plugged into and only ONE cable to do so. An improper connection cannot be made!

The BKRA-1CF allows a wide variety of equipment to be mixed and matched without having to worry about audio levels not being correct. Simply configure it to the models and brands to be used by selecting the appropriate cables and your done. No wiring mess, all cabling is clean and terminated in Mil-Spec type connectors on one end and the required connector to acomodate the radio and/or intercom on the other.

Other features include a cable to wire Radio Re-Broadcast to a Siren, Horn Honk Alert Function and Ignition Sense. There is also the CA104BX option which allows the use of a SINGLE headset with a radio for heavy equipment; NO Intercom System required.
